

The Mini Merlin Senses both Carbon Monoxide Gas & Natural Gas in one system.

What are the dangers of Carbon Monoxide?

Carbon monoxide is a highly poisonous gas with no taste, no colour and no smell. It can be produced when any fossil fuel such as coal, wood or natural gas is burned and there is not enough air supply.

Carbon monoxide kills up to 30 people each year and many more are seriously injured. It can escape into your home if a gas appliance is not installed correctly or serviced regularly.

What are the dangers of Natural Gas?

Natural gas is poisonous and highly flammable. If you smell a gas leak you should follow the following rules:

- Don't smoke or strike matches
- Don't turn electrical switches on or off
- Do put out naked flames
- Do open doors and windows
- Do keep people away from the affected area
- Do turn off the meter at the control valve

Unfortunately many people are unable to sense natural gas leaks for themselves due to sensory disabilities, old age or dementia - plus, standard Carbon Monoxide detectors do not sense Natural Gas leaks.

S&S Northern has built a reputation in the U.K. that is second to none. This reputation has been gained by offering not just the highest standard of service in the industry but also the best products available to meet our clients requirements. Established in 1995 S&S Northern has become synonymous with gas pressure proving and gas detection equipment. The company has achieved market leadership due to its dedicated efforts to supply top quality products that are safe, reliable and great value for money.

In addition the company continues to make significant improvements by regularly investing in training for its staff to ensure the customer receives the product most suited to their requirements, at a realistic price and in an acceptable time period. Furthermore the company continues to make significant improvements by investing in continuous research to improve its efficiency and quality of its products. Having divisions in the North and South gives better coverage of the UK than any of our competitors and allows us to respond immediately to any requests.

It is recognised in S&S Northern that quality with regards to both products and service is of the utmost importance in meeting our clients requirements. All members of our staff are rigorously trained to ensure that the highest level of quality is maintained at all times, for the benefit of our customers and for the continued success of S&S Northern.

Mini Merlin Features:

- ✓ Alarm sounds when Carbon Monoxide is detected.
- ✓ Alarm sounds when Natural Gas is detected.
- ✓ System shuts off leaking gas immediately (valve needed).
- ✓ System can activate a nurse call immediately.
- ✓ System is wired to the mains and requires no batteries.

Mini Merlin is easy to install but all gas work must be carried out by a qualified gas engineer.

Take control of gas:

The Mini Merlin can protect you and your family from the effects of highly poisonous Carbon Monoxide and potentially explosive Natural Gas.

Once a Natural Gas or Carbon Monoxide leak arises the Mini Merlin will quickly sense the gas and sound an audible alarm to alert anybody in immediate danger. Furthermore, if an optional gas valve is fitted, the Mini Merlin system will trigger the valve and cut off any gas supply to the faulty appliance. Amazingly, the Mini Merlin can also be set-up to activate a nurse call (where available), allowing for a super quick response to be initiated.

In summary, the Mini Merlin is a vital tool in the protection of you, your family and your home from life threatening gasses and the potential for explosions.

Order your Mini Merlin today.
